

# Hacking with WebSockets

— [ Mike Shema

— [ Sergey Shekyan

— [ Vaagn Toukharian

December 2012

# A Trip into HTML5

— [ **WebSockets background**

— [ **Their appeal to developers**

— [ **Their appeal to attackers**

— [ **What makes them better**

# HTML4's Crude Solutions

Forcing persistence on a non-persistent protocol

...often at the server's expense of one thread/request

...while dealing with the browser's per-domain connection limit

...and trying to figure out an efficient polling frequency

...just to know when the server has some data ready.

# Almost WebSockets

— [ Forcing HTML5 on a non-HTML5 browser

— **web-socket-js** – The power of Flash's raw sockets with the benefits(?) of Flash's security

— **sockjs-client** – Pure JavaScript, choose your poison: long-polling, XHR, etc.

— [ HTML5 Server-Sent Events (<http://www.w3.org/TR/eventsource/>)

— Properly-implemented long-polling

— Content only flows from server → client

# One Socket, Two Directions

The WebSocket Protocol enables **two-way communication** between a client running **untrusted code** in a controlled environment to a remote host that has **opted-in** to communications from that code.

Yay!

Hmm...

Uh oh

- RFC 6455

# Speak to Me

— [ **Protocol  
(RFC 6455)**

— [ **Low overhead**

— [ **Simple format**

— [ **Content agnostic**

— [ **HTTP compatible\***

— [ **JavaScript API**

— [ **.onmessage()**

— [ **.send()**

— [ **Data as String,  
Blob,  
ArrayBuffer**

# Handshake Challenge

GET /?encoding=text HTTP/1.1

Host: echo.websocket.org

User-Agent: ...

**Connection: Upgrade**

**Sec-WebSocket-Version: 13**

**Origin: http://www.websocket.org**

**Sec-WebSocket-Key: CjYoQD+BXc718rj3aiExxw==**

*base64 (16 random bytes)*

# Handshake Response

HTTP/1.1 101 Switching Protocols

**Upgrade: WebSocket**

**Connection: Upgrade**

*Proxy might  
remove this!*

**Sec-WebSocket-Accept:** c4RVZSkNSoEHizZu6BKI3v  
+xUul=

*base64 (SHA1 (challenge + GUID))*

[ then the data frames begin ]

# HTTP Handshake

- [ Proves mutual agreement to speak WebSockets

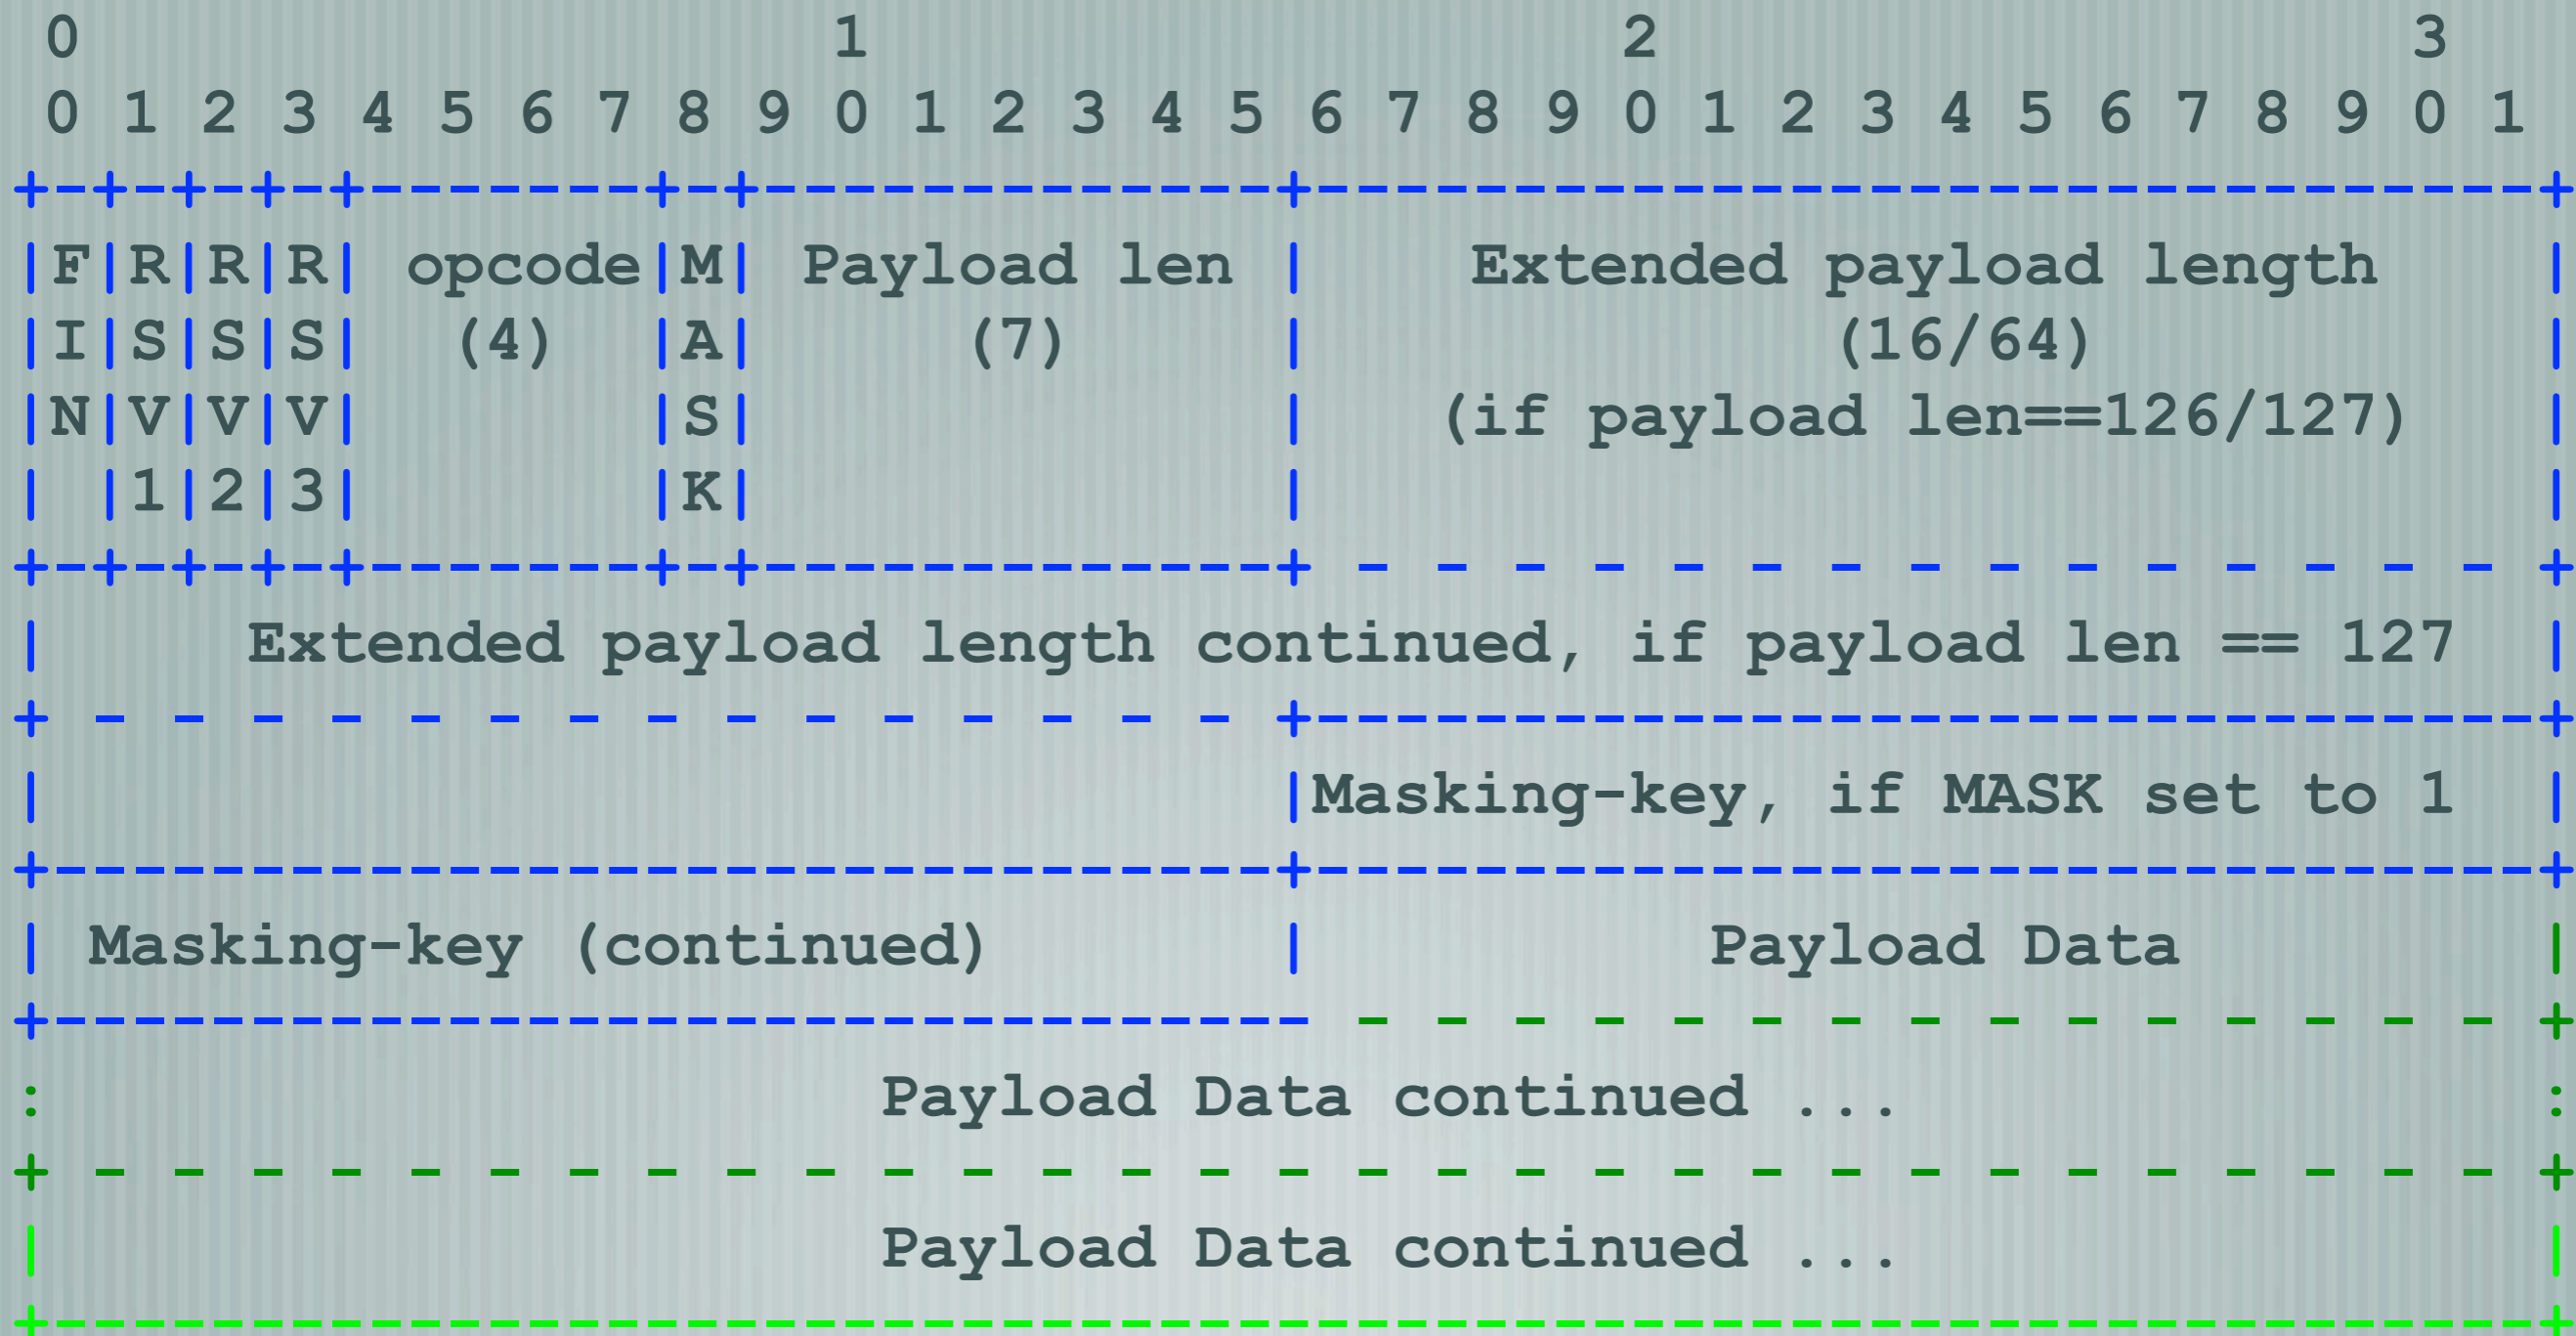

- [ Not intended to prove either trust or identity

- [ User Agent should not establish plaintext WebSocket (`ws :`) from "secure" resource (`https :`)

- [ Includes the Origin header

- [ Must complete before another connection may be established to the same origin

# Data Frame Details

# Variable Lengths

Decimal	Length (7 bits)	Variable Length (16- or 64-bit)
1	1 0 0 0 0 0 0	n/a
128	0 1 1 1 1 1 1	0 0 0 0 0 0 0 0 1 0 0 0 0 0 0 0 0 0
65535	0 1 1 1 1 1 1	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
65536	1 1 1 1 1 1 1	0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 0 1 . . .
$2^{64} - 1$	1 1 1 1 1 1 1	1 1 1 1 1 1 1 1 1 1 . . . 1 1 1 1 1 1 1 1 1
19	1 1 0 0 1 0 0	n/a
19	0 1 1 1 1 1 1	1 1 0 0 1 0 0 0 0 0 0 0 0 0 0 0 0 0
19	1 1 1 1 1 1 1	1 1 0 0 1 0 0 0 0 0 0 0 0 0 0 0 0 0 . . .

# Masking Data

32-bit pseudo-random value, XOR byte by byte

Prevent the browser from being leveraged for cross-protocol attacks, cache poisoning

# Design Choices

- [ Items transparent to JavaScript API
  - User Agents mask data to the server
  - “Ping” & “pong” frames for connection keep-alive
- [ User Agent should minimize details for certain kinds of connection failures to prevent “better” host/port scanning

# What makes us worry

# (Don't) Blame the Messenger

— [ WebSockets still fall victim to “old” threats

— [ WebSockets still have interesting things to discuss

# Mixed content handling

— [ If you can sniff `http:` you can sniff `ws:`

— [ If you can intercept or inject, you can overtake `ws:/`  
`wss:`

— [ It should be impossible to mix `ws:` with `https:` by  
RFC

— WebKit doesn't enforce this

# Denial of Service - Client

— [ WebSockets connection limit is different than HTTP connection limit

— [ Malicious content can exhaust browser by grabbing max. allowed number of WebSocket connections

— *"..Yes, WebSocket is the first way to open an unlimited number of connections to a single server, so it indeed likely needs additional protection to prevent DOS attacks.*

*But we don't really have a way to implement this correctly..."*

[https://bugs.webkit.org/show\\_bug.cgi?id=32246](https://bugs.webkit.org/show_bug.cgi?id=32246)

# Denial of Service - Server

Welcome!

Later!

- [ Malicious content can create large number of WebSocket connections to victim WebSocket server
- [ Attacks like SlowLoris strive to maintain persistent connections thus draining server resources. WebSockets are naturally like that

# Are Browsers OK?

- [ **Still no mixed content handling policy**  
implemented by WebKit-based
- [ **Firefox still doesn't let WebWorkers create WebSockets**
- [ **Message sizes handled differently**

# Fuzzing WS

- [ Fuzzing WS data

- Capturing real life data with JS

- Fuzzing within a Browser

- [ Fuzzing WS frameworks

- Fuzzing WS handshake

- Fuzzing WS Headers

# Fuzzing WS data with JS

```
var f_replace = '';
var f_append = '';

WebSocket.prototype._send =
WebSocket.prototype._send;
WebSocket.prototype.send = function (data) {
    this._send(data);
    this._addEventListener('message', function
(msg) {
    }, false);
    this.send = function (data) {

        if(f_replace != '') {
            data = f_replace;
        } else if(f_append != '') {
            data = data + f_append;
        }

        this._send(data);
    };
};
```

# Fuzzing Frameworks

- Getting Crashes (not yet)
- Fingerprinting frameworks

# Fingerprinting

## *WebSocket++*

Successful handshake:

HTTP/1.1 101 Switching Protocols

Connection: Upgrade

Sec-WebSocket-Accept: Pzio3NY64M/GFfA/kK4WJpj2xY4=

Server: *WebSocket++/0.2.0dev*

## *AutobahnPython*

Successful handshake:

HTTP/1.1 101 Switching Protocols

Connection: Upgrade

Sec-WebSocket-Accept: fKrZviGloYH4PrDbQ98Nvsbk2cU=

Server: AutobahnPython/0.5.9

Upgrade: WebSocket

Failed handshake:

HTTP/1.1 400 WebSocket version 12 not supported

(supported versions: 13,8,0)

Sec-WebSocket-Version: 13,8,0

# Fingerprinting

## *Node.JS*

Successful handshake:

HTTP/1.1 101 Switching Protocols

Connection: Upgrade

Sec-WebSocket-Accept: zSKX8MU5Omx1JXHacSpdN5a4ur4=

Upgrade: websocket

Failed handshake:

HTTP/1.1 426 Upgrade Required

Connection: close

Sec-WebSocket-Version: 13

X-WebSocket-Reject-Reason: Unsupported websocket client version: 12 Only versions 8 and 13 are supported.

# Looking for WS Security

— [ How to inspect WS traffic

— [ How to manipulate WS traffic?

— [ Are there browser plugins to help?

— [ Are there proxies that support WebSockets?

# Tools

— [ WireShark

— [ Proxies(ZAProxy, Fiddler)

— [ Chrome Developer Tools

— [ overloaded WebSocket constructor and methods

# Wish You Were Here

- [ Unawareness of WebSocket protocol by security devices (firewalls, IDS, IPS) makes them ineffective against malicious traffic

- Masking inhibits identifying patterns in traffic

- Missing auxiliary data type information makes it even harder

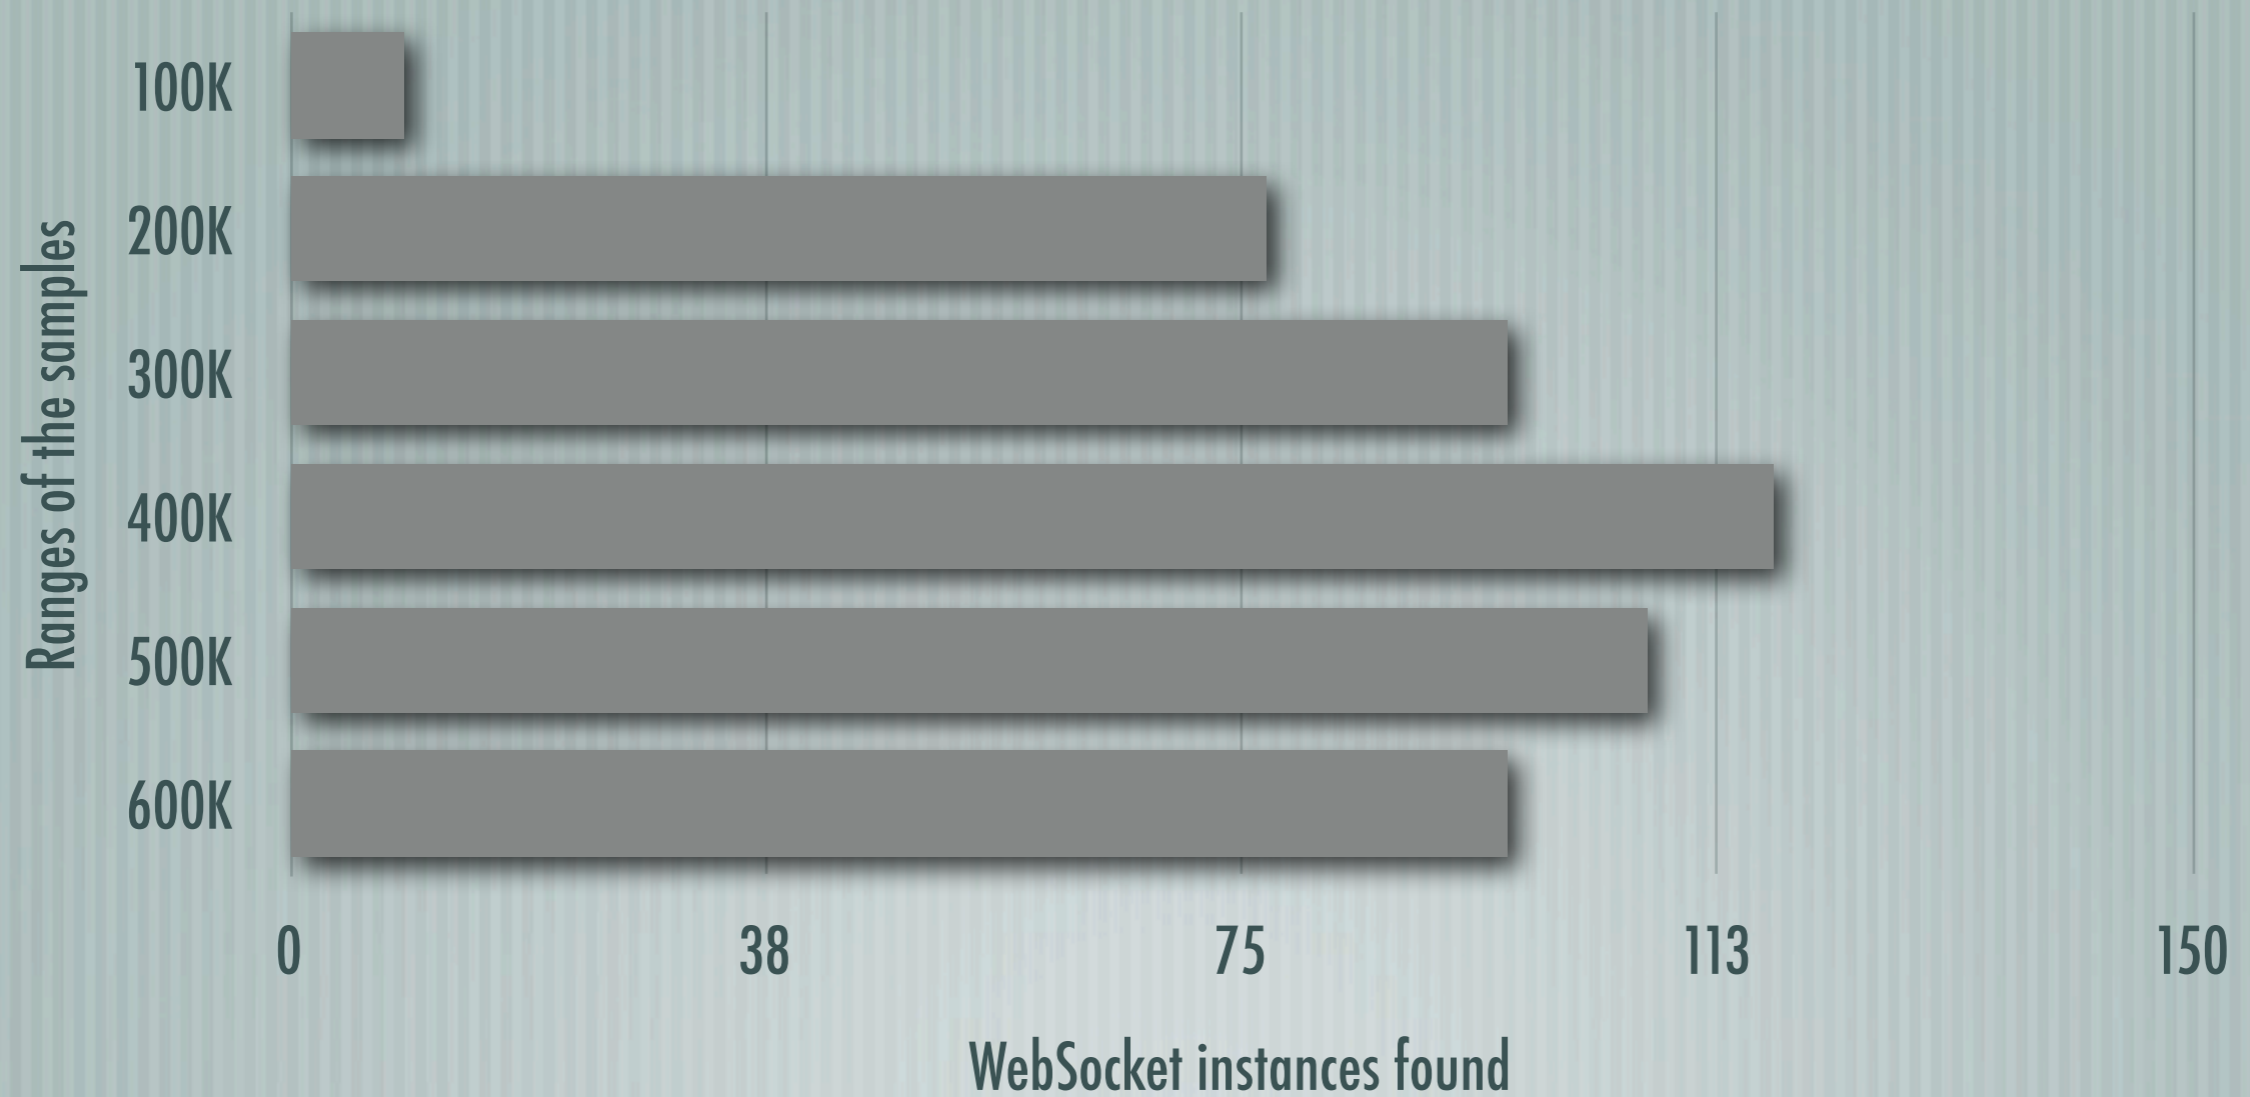

- [ Covert channels, command & control

- Resurrect Loki (Phrack 49)

- Sources of entropy: reserved flags, length representations, mask

# Not really...

Distribution of Alexa Top 600K websites that use WebSockets

# Details?

- [ **0.15%** of websites use WebSockets on landing page.

- [ **Less than 4%** of captured WebSockets are using plain `ws` :

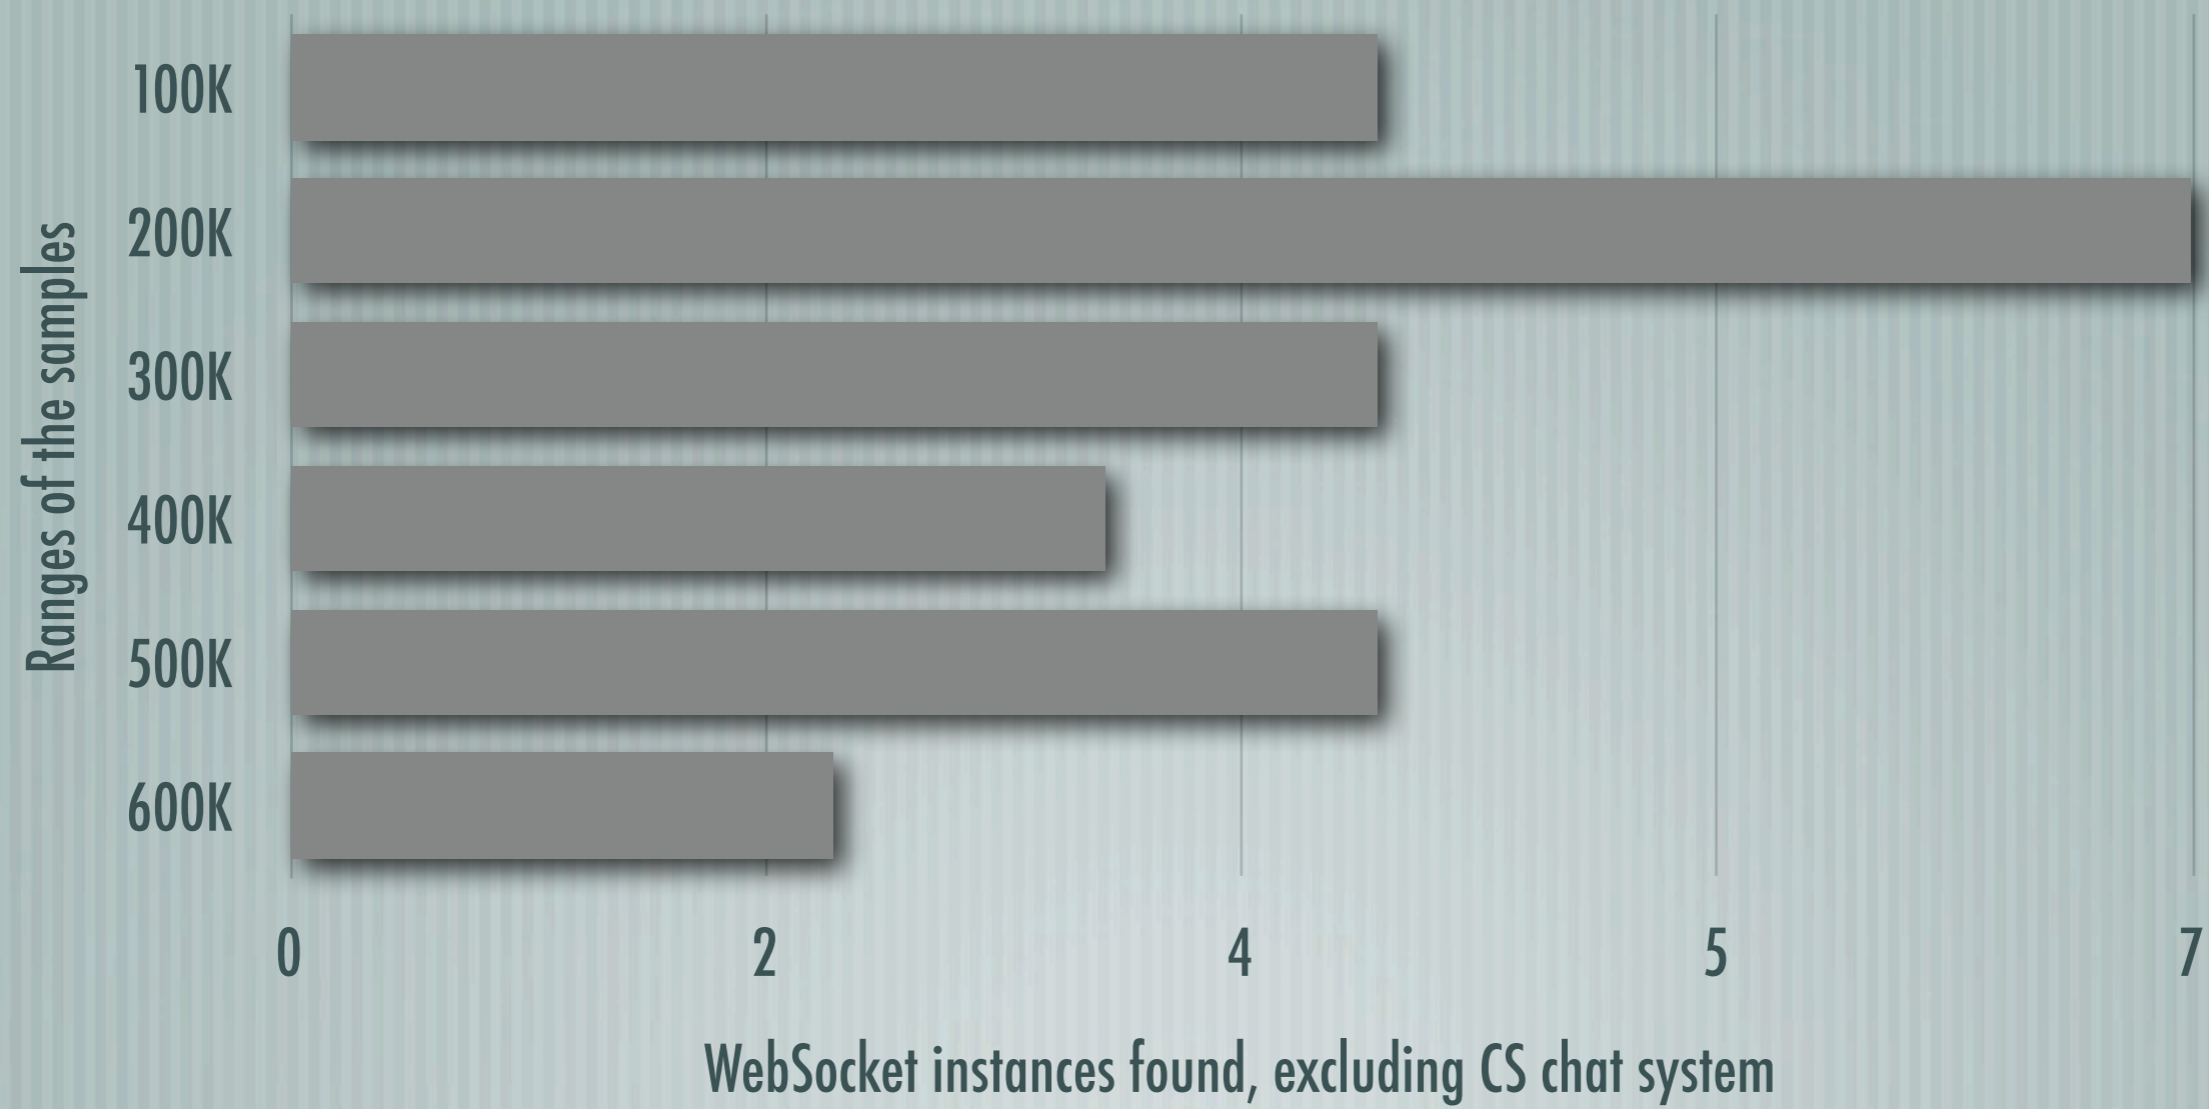

- [ 95% of total WebSockets connect to a single vendor's customer support chat system

- [ among remaining 5%, **less than 1% are using encryption**

# True picture is...

Distribution of Alexa Top 600K websites that use WebSockets

**What makes them  
better**

# Recommendations

- [ What it's good for

- Time critical data delivery

- Apps that require true bidirectional flow

- Interactivity

- Higher throughput

- [ Remember, it doesn't fix existing vulnerabilities

# Deploying a Server

— [ Capacity planning & measurement to prevent self-inflicted DoS

— [ Verify the Origin header

— [ As always, assume the client is hostile – don't trust it

— [ Be careful when implementing the HTTP handshake

— Create a single-purpose HTTP handler, not a pseudo-web server

# Security of the tunneled protocol

- [ Beware of decoupling WebSocket session context from the HTTP session context

- [ Watch for protocol mistakes

- using session cookies as chat IDs (visible to the recipient)

- replay

- spoofing

- fragmentation, overlapping fragments

- server-side buffer overflows, underflows

# Remember Security Basics

— [ **wss** : means secure transport, not secure app

— [ **Authn/Authz**

— [ **Session identifiers**

— [ **Server-side input validation**

— [ **Resource exhaustion**

— [ **Failure states**

# Summary

— [ WebSockets solve connection problems, not security problems.

— [ Basic security principles still apply, especially for data frames' content.

— [ “The new port 80” – security devices have poor (nonexistent!?) awareness of the protocol.

# Q&A
